

ABSTRACT

- 5 Peptides and peptidomimetics capable of modulating apoptosis through their
interaction with cellular IAPs (inhibitor of apoptosis proteins) are disclosed. The
peptides and mimetics are based on the N-terminal tetrapeptide of IAP-binding
proteins, such as Smac/DIABLO, Hid, Grim and Reaper, which interact with a
specific surface groove of IAP. Also disclosed are methods of using these peptides
10 and peptidomimetics for therapeutic purposes and for rational drug design.
